

Inforenz and First Base Technologies form Trusted Partner relationship to provide seamless service to detect and protect against security breaches

### 8 July 2003

Organisations that need discreet information forensics and ethical hacking services from independent specialists of the highest repute will benefit from a new trusted partnership between penetration testing and audit specialists First Base Technologies and information forensics experts Inforenz Limited. The partnership, is not driven by financial considerations, but by clients' need for the best in specialist information security services from unimpeachable sources.

“We only form partnerships with a very select band of information security specialists,” said Peter Wood, Chief of Operations at First Base Technologies. “This is not a reseller arrangement — it is a trust relationship.”

First Base Technologies specialises in preventative measures that protect clients' systems from internal and external security breaches.

“In our risk assessment work we sometimes discover that malevolent activity may have occurred. At this point we recommend Inforenz perform the necessary forensic analysis for our clients,” continued Peter Wood. “We have known key Inforenz personnel for several years and have been extremely impressed by their in-depth understanding of encryption and complex data recovery, their discretion and ethical stance.”

“The sensitivity and growing complexity of information security and computer crime means that organisations want the assurance that they are dealing with independent companies of the highest repute,” said Andy Clark, Director of Inforenz. “Our forensics and concealed data recovery skills complement the penetration testing and audit abilities of First Base Technologies — and the ethos of our companies is a perfect match. We provide a seamless service for clients when the need arises.”

## **Notes To Editors**

### **About Inforenz**

Inforenz Limited is a computer forensics investigation company dedicated to helping law enforcement agencies and commercial organisations solve their most challenging information recovery problems, especially those involving password protection, encryption and steganography. Inforenz provides support services throughout or at the most difficult stages in computer forensics investigations.

Co-directors Andy Clark, Vince Gallo and Nick Spenceley, key players in the development of information security over the past two decades, founded Inforenz in 2001. Together with other staff and trusted partners selected for their knowledge, experience and integrity, they offer real-world investigation experience, technical knowledge and sound management practice for the benefit of clients and partners.

### **About First Base Technologies**

First Base Technologies' experience in BS7799 and associated gap analysis techniques gives a uniquely homogenous perspective on Internet security threats and vulnerabilities. They combine ethical hacking skills with social engineering, staff interviews, documentation reviews and traditional physical security, giving a truly comprehensive review of business risks. The penetration testing team at First Base Technologies has over 100 combined years of experience in IT, data communications and information security, embracing a wide variety of operating systems, communications protocols and equipment.
